What will we build today?

Returns & Refunds Agent

The Scenario:

- You work at an e-commerce company that needs to **automate its customer returns and refunds workflow**.
- Today, support agents **manually** look up orders, check return eligibility windows, calculate refund amounts, and reference country-specific return policies — a slow and error-prone process.
- Your goal is to build an **AI-powered assistant** that handles all of this through **natural conversation**.

Getting ready for the hands-on labs

Accessing your Free AWS accounts

1. Free AWS accounts will be available for up to 100 people
2. Accounts will be active for 48 hours
3. Go to <https://tinyurl.com/agentforge-bangkok> (Access code: 2ab3-00267d-43)
4. Agree on the Terms and Conditions → Join event
5. Access your free AWS account console
6. Open the step-by-step workshop guide

Log out from any other AWS account before joining this event!

Enter your work email to receive a 9-digit pass

Terms and Conditions

Read and accept before joining the event

1. By using AWS Workshop Studio for the relevant event, you agree to the AWS Event Terms and Conditions and the AWS Acceptable Use Policy. You acknowledge and agree that are using an AWS-owned account that you can only access for the duration of the relevant event. If you find residual resources or materials in the AWS-owned account, you will make us aware and cease use of the account. AWS reserves the right to terminate the account and delete the contents at any time.
2. You will not: (a) process or run any operation on any data other than test data sets or lab-approved materials by AWS, and (b) copy, import, export or otherwise create derivate works of materials provided by AWS, including but not limited to, data sets.
3. AWS is under no obligation to enable the transmission of your materials through Event Engine and may, in its discretion, edit, block, refuse to post, or remove your materials at any time.
4. Your use of AWS Workshop Studio will comply with these terms and all applicable laws, and your access to AWS Workshop Studio will immediately and automatically terminate if you do not comply with any of these terms or conditions.

Build & Deploy AI Agents on Amazon Bedrock AgentCore using AgentCore CLI and Vibe Coding with Kiro

Complexity level

300

Topics

Generative AI

AWS services

Kiro, Amazon Bedrock AgentCore

Description

In this hands-on workshop, you'll learn how to build and deploy AI agents end-to-end using Vibe Coding with Kiro - with no manual coding required. We'll leverage the latest feature...

Build & Deploy AI Agents on Amazon Bedrock AgentCore using Vibe Coding with Kiro

Build & Deploy AI Agents on Amazon Bedrock AgentCore using Vibe Coding with Kiro

Welcome to the "Build & Deploy AI Agents on Amazon Bedrock AgentCore using Vibe Coding with Kiro" workshop! In this hands-on workshop, you'll experience the power of **vibe coding** - building production-ready AI agents using only natural language. Simply describe what you want in plain English, and Kiro generates complete, tested, production-ready code.

You'll build a complete Returns & Refunds AI agent and deploy it to production - all through conversation with Kiro.

What is Vibe Coding?

Vibe coding is the future of software development. Instead of writing code manually:

1. **Describe what you want** in natural language
2. **Kiro generates the code** - complete, tested, production-ready
3. **Run it immediately** - no debugging, no syntax errors

That's it! No programming syntax to memorize, no boilerplate to write, no stack traces to debug. Just natural language → working software.

In this workshop, you won't write a single line of code manually. Everything - from agent logic to AWS infrastructure - is built through vibe coding with Kiro.

What is Kiro?

Prompt XYZ

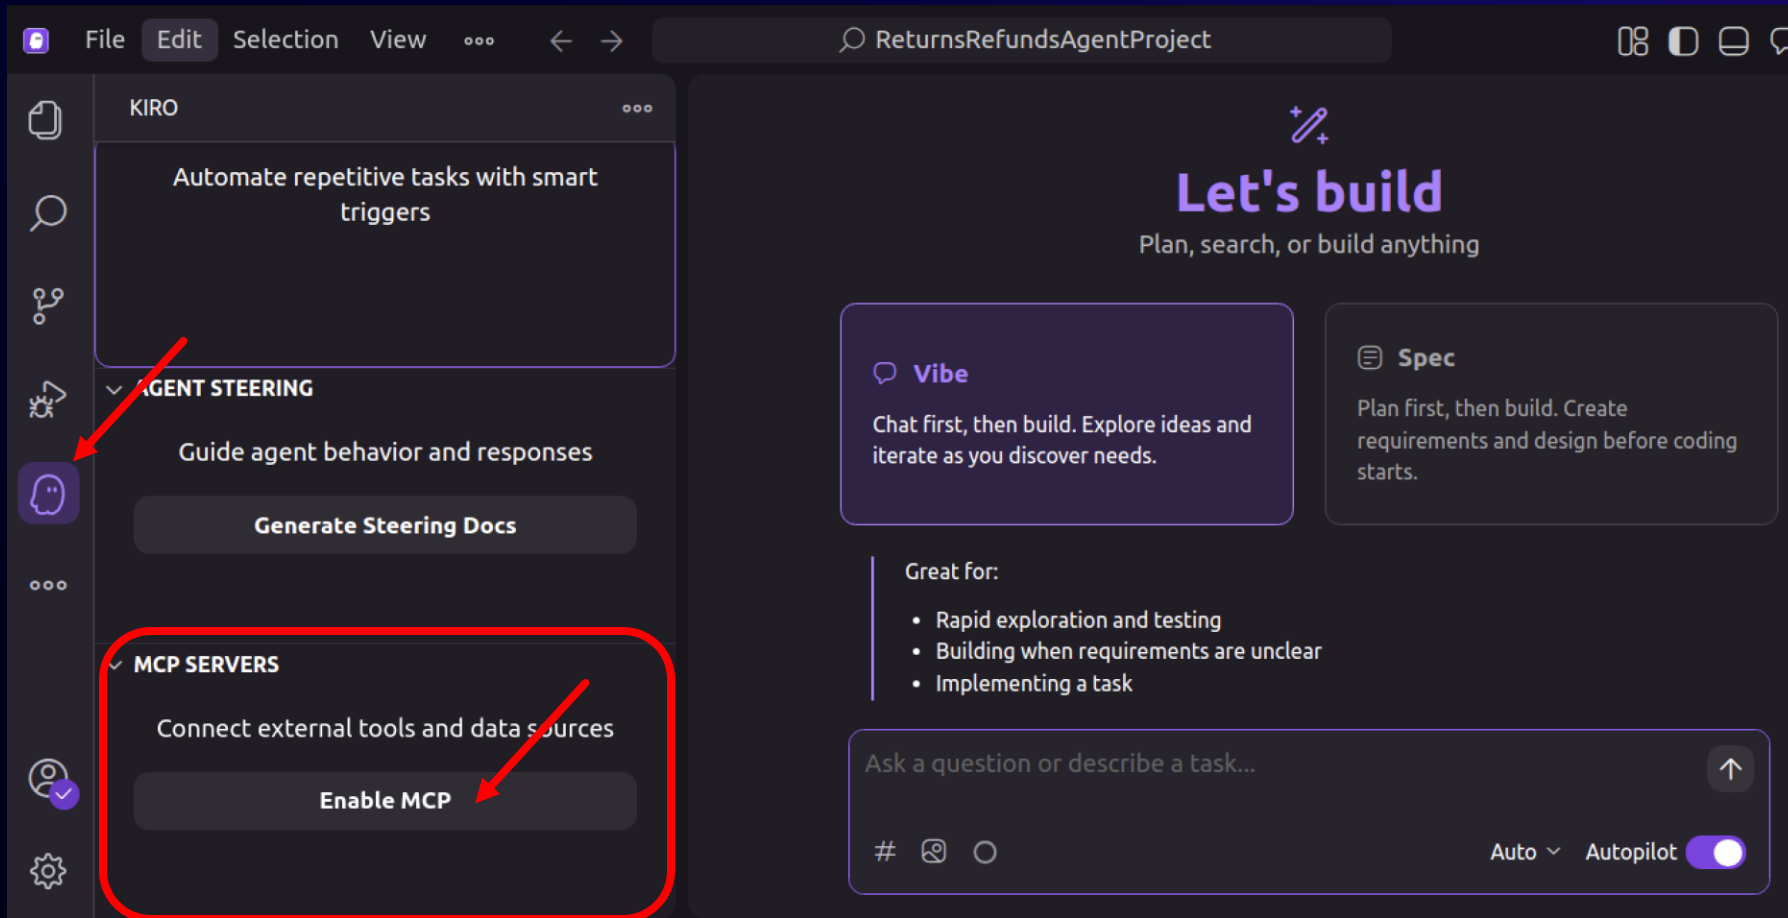

Copy-paste within the same environment

Tab-prompts.md

- Includes all the prompts that you will need for all the labs
- You can just copy-paste them within the same environment
- In /ReturnsRefundsAgentProject

Enable MCP servers in Kiro

- Without connection to MCP servers, the LLM **does not know** the latest AWS documentation, APIs and best practices
- Enable the included MCP servers to the **AWS documentation and Strands SDK**
- Optionally you can include any MCP server that could help the model know the latest information

AgentCore CLI UI nuances

Pressing **ARROW** keys moves highlighter up and down

Add Memory

✓ Name → ✓ Expiry → ● Strategies → ○ Streaming → ○ Confirm

Select memory strategies

Choose strategies for this memory (optional)

- ☐ Semantic - Vector-based semantic search over memories
- ☐ Summarization - Compress and summarize conversation context
- › ☐ User preference - Track and recall user preferences
- ☐ Episodic - Capture and reflect on meaningful interaction episodes

Pressing only **ENTER** skips this option

(selects nothing!)

Add Memory

✓ Name → ✓ Expiry → ● Strategies → ○ Streaming → ○ Confirm
